Re: CC Docket No.88-2 Phase I - Filing and Review of Open  
Network Architecture Plans

Dear Ms. Dortch:

BellSouth Telecommunications, Inc. (BellSouth) hereby submits its Annual ONA Report, in accordance with the Commission's Memorandum Opinion and Order, released December 19, 1991, in CC Docket No. 88-2. An index of these reports is attached.

BellSouth is submitting this report to the Commission electronically. Qualex has also been served a copy electronically.

If you have any questions concerning this submission, please contact me on (202) 463-4113.

Sincerely,

Kathleen B. Levitz  
Vice President - Federal Regulatory

## **INDEX OF BELLSOUTH ANNUAL ONA REPORT**

**April 15, 2002**

<b>Report No.</b>	<b>Description</b>
<b>1</b>	<b>ONA DEPLOYMENT REPORT</b>
<b>2</b>	<b>DISPOSITION OF NEW ONA SERVICE REQUESTS</b>
<b>3</b>	<b>ONA SERVICE REQUESTS PREVIOUSLY DEEMED TECHNICALLY INFEASIBLE</b>
<b>4.</b>	<b>SS7, ISDN, AND IN PROJECTED DEPLOYMENT</b>
<b>5</b>	<b>NEW ONA SERVICES AVAILABLE THROUGH SS7, ISDN, AND IN</b>
<b>6</b>	<b>EFFORTS IN THE NIIF</b>
<b>7</b>	<b>PROGRESS IN PROVIDING BILLING INFORMATION</b>
<b>8</b>	<b>PROGRESS IN DEVELOPING AND IMPLEMENTING OSS SERVICES</b>
<b>9</b>	<b>PROGRESS ON UNIFORM PROVISION OF OSS SERVICES</b>
<b>10</b>	<b>BSEs USED IN BELLSOUTH'S ENHANCED SERVICES</b>
<b>11</b>	<b>ACCESS TO ADVANCED TECHNOLOGIES</b>

## **Performance and Fault Manaeement Service (PFMS)**

Real Time Access to Exchange Network Testing Facilities and Pass Through Diagnostics to User may be met with BellSouth's Performance and Fault Management Service (PFMS). PFMS is available lhmugh individual case basis/special assembly arrangementl to any cuslomer who rcquesls it. BellSouth has not received any requests for PFMS. BellSouth's FlexSewa service also meels some of the diagnostics requested for Pass Through Diagnostics To User. For deployment information regarding FlexSew, see deployment projections for Network Reconfiguration.

## **DSO-B Interface. DSO-B Transroti Facilities. Derived Data Channel. and Derived Data Channel Servlee**

The above referenced services provide or are associated with the provision of Clear Access to Derived Channel capability. BellSouth has efTective Tiffs for these services in applicable jurisdiclicms. Since tie tariffs were filed, there has been an absence of demand for these services. Due to this absence of demand. deployment of these capahilides is currently suspended.

## **BellSouth**

04-15-03

### **Report 2 – Disposition of New ONA Service Requests**

BellSouth received the following requests for new ONA capabilities from Enhanced/Information Service Providers (ESPs/ISPs) in 2002.

**Request # 1:** This ISP request inquired about the availability of a Multi Quality of Service (QoS) product. BellSouth responded that it is currently developing such a product and plans to offer pursuant to tariff in November 2003.

**Requests #2 -7:** These ISP requests inquired about the availability of VPI/VCI management services in BellSouth's DSL product suite. BellSouth responded that it is currently developing the necessary operating system to support management of VPI/VCI assignments for ISPs, with product availability scheduled for mid 2003.

**Requests #7 - 12:** These ISP requests inquired about the availability of Mean Time to Repair (MTTR) Service Level Agreements (SLAs) for BellSouth's Business Class and Symmetrical DSL products. BellSouth is working with ISP's to more clearly define MTTR SLAs, and plans to offer pursuant to tariff in early 2004.

**Requests #12 - 19:** These ISP requests asked for specific enhancements to BellSouth's existing BellSouth ADSL Service, End-User Aggregation Tariff. One request was to add Business Class and Symmetrical DSL capability to our End-User Aggregation Tariff. BellSouth is currently developing the ability to support UBR QoS through the EUA tariff, and plans to offer pursuant to tariff in early to mid 2004.

## Report 3 – ONA Service Requests Previously Deemed Technically Infeasible

### Single Number Access for Multiple Locations

BellSouth had developed and tariffed several services addressing the above capability, including ZipConnect<sup>sm</sup>, DataReach<sup>sm</sup>, ISDN Single Number Routing Option<sup>sm</sup>, and UNISERV<sup>sm</sup>. Each of these services use non-rate center specific NPA codes (203, 440, 530, & 930) to allow call completion from different originating locations to different customer specified destinations, based on a single originating number. With number conservation being the main driver, continued use of these NPA codes and limited market demand prompted BST to file an amendment to its ONA Plan in October 2002, asking permission from the FCC to allow discontinuance these services. A Memorandum Opinion and Order (DA 03-849) was released on March 21, 2003, allowing BST to discontinue DataReach<sup>sm</sup>, ISDN Single Number Routing Option<sup>sm</sup>, and UNISERV<sup>sm</sup>. The request to allow discontinuance of ZipConnect<sup>sm</sup> is still under consideration by the FCC.

### Call Forwarding With Call Waiting

Several options for call forwarding have been developed and tariffed by BellSouth. See ONA Deployment (Report 1) for details.

### Call Forwarding Busy Line/Don't Answer

Call Forwarding Busy Line/Don't Answer is available almost ubiquitously across BellSouth service areas. See OBA Deployment (Report 1) for details.

## Report 4 – SS7, ISDN, and IN Deployment Schedule

This report contains six tables which provide projections for SS7, ISDN and IN deployment by BellSouth.

Table 1 provides a summary of projected CCS7 (Bellcore TR-TSY-000317) deployment, based on access lines served by CCS7 switches. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 2 represents projected deployment plans for CCS7 Network Interconnect (Bellcore TR-TSY-000394) (CCSAC) capabilities based on central offices being equipped for interconnection. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 3 provides a summary of Basic Rate ISDN deployment. The access lines counted in these percentages are lines served by central offices that are or will be equipped for ISDN capability. Equipment provisioning beyond the initial capacity will be based on market demand and forecast. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 4 estimates the deployment of Primary Rate ISDN. The access lines counted in these percentages are lines served by central offices that are or will be equipped for Primary Rate ISDN capability. Equipment provisioning beyond the initial capacity will be based on market demand and forecast. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 5 provides projections for the deployment of IN capabilities. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 6 provides projections for the deployment of AIN 0.1 capabilities. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Report 4 – SS7, ISDN, and IN Deployment Schedule

Report 5 – New ONA Services Available Through SS7, ISDN, and IN

No new ONA services using SS7, ISDN, or IN were introduced in 2002.

## Report 6 – Efforts in the NIIF

The NIIF provides an open forum to encourage the discussion and resolution, on a voluntary basis, of industry-wide issues associated with telecommunications network interconnection and interoperability which involve network architecture, management, testing and operations and facilitates the exchange of information concerning these topics.

The NIIF has two standing committees, one of which is the Network Inter-Operability Committee (NIOC). The NIOC addresses issues related to installation, maintenance, management, and testing guidelines for interconnected telecommunications and signaling networks. The NIOC also facilitates the exchange of information regarding telecommunications network architecture and interconnection, including ONA and/or other technical interaction.

Functional areas to be addressed by the NIOC include the following:

- Emergency Communications
- Facility Guidelines
- Installation Maintenance Testing Guidelines
- Installation Guidelines
- Maintenance Guidelines
- Maintenance Windows
- Mass Calling
- Notification (Maintenance and Trouble)
- Notifications (Traffic Affecting: Network Outages and Changes)
- Open Network Architecture (ONA)
- Security
- Signaling Operational Issues (e.g., SS7)
- Test Line Coordination
- Traffic Management
- Trouble Management

BellSouth is a participant in NIIF and NIOC activities. NIIF and NIOC issue background information is available via the Internet at

<http://www.atis.org/atis/clc/NIIF/Niifhom.htm>.

**BellSouth**

04-15-03

**Report 7 – Progress in Providing Billing Information**

Bellsouth provides a wide range of services to facilitate ESP billing, as shown in previous reports. BellSouth is not aware of any outstanding billing information issues by ESPs served by BST. At the national level, there are no active NIIF issues concerning the provision of billing information to ESPs.

Report 8 – Progress in Developing and Implementing OSS Services

BellSouth has deployed a multitude of OSS access capabilities for ESPs offering a wide variety of functions and capabilities covering provisioning, repair, maintenance, billing, and account inquiry. BellSouth will continue to enhance existing OSS access systems and develop new access systems to meet identified ESP requirements. As noted in Report 9, following, BellSouth is also an active participant in industry forums addressing OSS access issues.

One service introduced related to OSS access in 2002 was Network Visibility Service (NVS). NVS is a tool that provides customers a view into their BellSouth Fast Packet network to monitor fault and alarm information as network events occur. NVS also provides customers the ability to view near real-time network performance and historical performance reports.

BellSouth Network Visibility Service is available on an optional basis as a feature of BellSouth Exchange Access Frame Relay Service (XAFRS). BellSouth Managed Shared Frame Relay Service (MSFRS), BellSouth Exchange Access Asynchronous Transfer Mode Service (XAATMS), and BellSouth Managed Shared Asynchronous Transfer Mode Service (MSATMS).

BellSouth Network Visibility Service is offered in Tariff F.C.C. No. 1, Section 21.6.1, and in the intrastate access tariffs in all nine BST states.

## **BellSouth**

04-15-03

### **Report 9 – Progress on Uniform Provision of OSS Services**

BellSouth is an active participant in national forums and committees that promote uniformity in provision of OSS services to carriers, including T1M1.5, TCIF and OBF, as well as on implementation of new standards and resolutions from the industry. The T1M1.5 defines technical OAM&P standards for OSS, while the TCIF deals with implementation standards. Both conform to the business processes for OSS services as defined by the OBF forum. There are also cross-forum industry working group that span over T1M1, TCIF and OBF. One example is the Uniform Ordering Model (UOM) group that provides standards for access and local orderings and supporting functions.

BellSouth has been actively involved in those standard working groups, through active participation in meetings, through standard reviews and through OSS transformation projects to conform to uniform industry standards to OSS services.

BellSouth has been involved in the Local Service Ordering Guidelines from OBF and the TCIF/T1M1.5 standards. Various system releases have been implemented or are being planned to conform the newly LSOG-6 as well as the TCIF ELMS-6 standards.

As previously reported, BellSouth was one of the founding members in the UOM group that consists of various cross-forum standard groups. BellSouth has contributed to related standards for ordering services, such as the T1.256 EAO (Electronic Access Ordering) Inquiry Functions standard of 2001 that was formally release in ATIS publication in year 2002.

BellSouth has also actively participated in the OBF in providing leadership for various subcommittee management positions. In addition, BellSouth also contributed to new technologies studies for enhancing OSS implementations. BellSouth has continued to designate voting coverage and to manage the draft standards review and comments in order to contribute to the process of successful implementation of uniform OSS services.

One area BellSouth has been actively involved is the conversion into XML based standard models and OSS service. Since the initial kickoff in year 2000 of T1M1 Telecommunications Markup Language (TML) group, BellSouth has been proactively implementing XML and TML models in other Electronic Access Ordering Models and Local Access Ordering OSS systems.

In summary, BellSouth has been actively and proactively in meeting the industry requirements and standards in providing Uniform OSS Services in all the OAM&P areas.

**BellSouth**

Monthly Detail Recording (NC #89)

CDI (Call Detail Recording Reports)

Multipath

(Call Forwarding Variable/Multiple Simultaneous Calls) (NC #4)

(Call Forwarding Busy Line/Don't Answer Multiple Simultaneous Calls) (NC #4)

FlexServ<sup>®</sup> Service (NC #76)

(Ability to Reconfigure Networks)

BellSouth Remote Access Service (BSA)

BellSouth ADSL Service

BellSouth's enhanced service operations also utilize or plan to utilize other tariffed services that are available to, and, in fact, are used by, other ESPs, such as TouchTone service, PBX trunks, Primary Rate ISDN, ISDN Business Service, Direct Inward Dialing (DID) service, Call Transfer on DID, Native Mode LAN Interconnection (NMLI), AdWatch<sup>®</sup>, SMARTRing<sup>®</sup> Service, SMARTPath<sup>®</sup> Service, CrisisLinkSM, and 1FBs (standard flat-rated business lines). These services also are provided on the same terms and conditions and at the same rates reflected in BellSouth's tariffs.

Report 11 – Access to Advanced Technologies

BellSouth is committed to providing unbundled access to advanced technologies. Following are brief discussions of SS7, Common Channel Signaling, Integrated Services Digital Network, Fast Packet Access, and Asynchronous Digital Subscriber Line technologies.

**ADVANCED INTELLIGENT NETWORK**

In order to meet enhanced service provider (ESP) and end user demands for advanced network capabilities, BellSouth is deploying its version of an Advanced Intelligent Network (AIN). The key architectural attribute of AIN is the separation of service logic programs and/or databases from traditional end office switches. The placement of service logic programs on separate network computer platforms is made possible by SS7 technology that facilitates communications between the switch and the service hardware/software.

By moving service logic to a separate computer platform, AIN reduces LEC dependence on service specific software deployment (i.e. feature capability) within network end offices. In this manner, AIN allows for the development of a single service application, which can operate in conjunction with different switch types, rather than the traditional development of a specialized service application for each switch type. Aside from the benefits to be gained by introducing such operational and development efficiencies, AIN will benefit end users by allowing for more rapid and efficient deployment of new end user applications.

BellSouth's AIN is composed of AIN-equipped switches, service switching points (SSPs), signal transfer points (STPs), service control points (SCPs) and service nodes (SNs).<sup>1</sup> The STPs and SCPs are deployed in BellSouth's network as mated pairs for increased reliability. The STPs are deployed in a two-tier hierarchy, with local STPs distributed across the region. Network elements served by different local STPs can communicate with each other through linkages with a regional STP.

A fundamental principle in the deployment of the AIN is the ability of the end office switch to suspend real time call processing to allow for interaction with other AIN network elements. Suspension of call processing to request AIN instructions can occur at several points within the AIN call model.<sup>2</sup> Once a call is suspended, queries (triggers) can be launched to AIN SCPs and SNs<sup>3</sup> and

---

<sup>1</sup> BellSouth's AIN network does not include switch adjuncts described in Bellcore technical requirements for AIN Release 1 (TA-NWT-001127, "AIN Adjunct General Requirements", Issue 1, April 1992).

<sup>2</sup> The AIN call model and the various points of interaction are more thoroughly described in Bellcore TR 1298, AIN 0.2 Switching Systems Generic Requirements, Issue 2, April 1993.

<sup>3</sup> AIN messaging to and from SNs requires AIN 0.2.

Report 11 – Access to Advanced Technologies

responses (commands) that provide call-processing instructions, which can then be directed from these same platforms to the switch.

BellSouth's SCP is a programmable platform which receives AIN queries from the SSP and sends AIN call control commands to the SSP. The SCP is interconnected to the SSP via SS7 signaling links and does not have a physical connection to the call itself.

The AIN SN is a programmable platform, which may be used to provide services that require physical connectivity to a call. A service node could be used, for example, to provide customized announcements, voice recognition, voice synthesis, or digit collection in support of voice services. These nodes will be connected to an SSP via an ISDN interface. Today, third party SNs can be connected to the network via a tariffed voice grade ISDN circuit.

BellSouth uses a separate platform known as a service management system (SMS) to administer the SCP memory, to manage SCP and SN data, to access network traffic data, to enter/update service provider and end user records, and to manage the subscription to AIN services. In this manner the SMS acts as a key Operations Support System (OSS) for AIN.

### **COMMON CHANNEL SIGNALING**

Common Channel Signaling/Signaling System 7 (CCS/SS7) is the backbone of the intelligent network infrastructure. This network infrastructure performs traditional functions more efficiently, broadens the capabilities that BellSouth may offer its customers, and supports the FCC's goal of bringing to the public the benefits of the information age.

The Common Channel Signaling network capability is based on the American National Standards Institute (ANSI) T1 Committee's Signaling System 7 protocol. CCS/SS7 is a signaling system, which performs network control functions for a variety of services, including interoffice trunk signaling, database queries, data transmission and access call setup. Since these links can provide signaling and control functions for multiple telecommunications paths without utilizing these paths, greater efficiencies are gained.

BellSouth's use of the CCS/SS7 technology is part of the ongoing modernization of its network. Deployment of CCS/SS7 technology in BellSouth is based on a total view of existing and future services, network evolution and market needs. Use of the CCS/SS7 technology facilitates BellSouth's ability to provide logical interconnection to other technologies such as BellSouth's Advanced Intelligent Network (AIN).

Report 11 – Access to Advanced Technologies

BellSouth has long been committed to use of the CCS/SS7 technology, beginning with its initial interstate offering of Common Channel Signaling Access Capability (CCSAC). CCSAC is an optional signaling arrangement associated with switched access, which is available with Feature Group D. The CCSAC option was filed and became effective in 1990. When a customer orders Feature Group D trunks with CCSAC, the necessary signaling connections are provided as part of Feature Group D service.

Other optional features available with Feature Group D when CCSAC is specified are Calling Party Number (CPN), Charge Number or Automatic Number Identification (ANI), and Carrier Selection Parameter (CSP). The CPN option provides the capability in end offices to pass to an access service customer the calling party's ten-digit telephone number. ANI provides the capability in end offices to pass to an access service customer the calling party's billing number. CSP (1) identifies the dialing pattern employed by the end user, if known, and (2) provides an indicator in the initial address message, which signifies whether or not the call originated from a presubscribed end user of that access customer.

Another option available with the CCS/SS7 technology is the 64 Clear Channel Capability. The 64 Clear Channel Capability provides the transmission rate capability of CCSAC equipped trunks at 64 Kbps. Other interstate offerings available via the CCS/SS7 technology include BellSouth's Line Information Database (LIDB) and 800 Database services.

IntraLATA offerings made available through CCS/SS7 include BellSouth's TouchStar® family of products. This family of products includes Call Return, Repeat Dialing, Call Tracing, Call Block, Call Selector, Preferred Call Forwarding, Caller ID, Call Tracking and BellSouth's new service offering Caller ID Deluxe. These features are available on an optional and individual basis.

### **INTEGRATED SERVICES DIGITAL NETWORK**

Integrated Services Digital Network (ISDN) is a digital network with signaling, switching and transport capabilities supporting a wide range of customer options over a single digital interface.

ISDN is a digital loop technology, which, in conjunction with CCS/SS7, enables end-to-end digital information, signaling, switching and transport. ISDN technology also provides a common interface to voice and data services, quality data transmission, network management and control capabilities.

BellSouth is committed to the use of ISDN technology and continues to make

Report 11 – Access to Advanced Technologies

new options available. BellSouth has used ISDN technology to make a number of tariffed options available to customers throughout its nine state region. These offerings include Basic Rate ISDN (ISDN Business Service and ISDN Residence Service) and Primary Rate ISDN. Several optional features may be added to these basic ISDN capabilities.

One option available is BellSouth's Primary Rate ISDN Extended Reach Service (ERS). The ERS option is designed to extend the reach of the inward data option customer from a centrally located metropolitan local calling area into the areas of the LATA, which are non-local to the metropolitan area. The ERS customer purchases telephone numbers within each desired non-local calling area to allow their clients to call them without incurring intraLATA toll charges.

**FAST PACKET SERVICES**

BellSouth continues to develop and improve fast packet access services (Frame Relay service, Native Mode LAN Interconnection (NMLI), Broadband Exchange Line service, and Asynchronous Transfer Mode (ATM) service) throughout the BellSouth Region. BellSouth will continue to work with Enhanced Service Providers to develop and improve services and features for BST's fast packet network.

One recent development was the introduction of gigabit speed access service using NMLI. NMLI is tariffed in the interstate jurisdictions and the intrastate jurisdiction in all nine BellSouth states.

**ASYNCHRONOUS DIGITAL SUBSCRIBER LINE (ADSL) SERVICE**

ADSL is a wholesale service offering in the interstate jurisdiction. Several transfer rates are available currently, but additional transfer rates are under development for both the residential and the business markets. Preliminary plans call for introduction of additional transfer rates in the 2003 timeframe.
